

FlexCube 530

Flexible feeding system for flat and cubic parts and components from 30 to 150 mm

The FlexCube 530 is the ideal feeding system when high flexibility in production is required. Vibration platforms are usually used together with an image processing system and a robot for feeding parts with different geometries. Thanks to the patented 3-axis system, even sensitive parts can be fed reliably.

The parts are evenly distributed on the surface of the feeder and, if required, can also be aligned in all directions using structured base plates and intelligent vibration movements. Entire families of parts can be separated and fed with one feeding system, allowing the system to be used for future tasks.

Feeder Advantages:

Bulk parts are dropped on vibratory platform

Parts are spread evenly thanks to intelligent 3-axis vibration

Vision system (SmartSight) detects which parts are correctly oriented

Parts are picked and assembled by robot

- **Compatible with all part geometries:** 99% of parts can be fed, including complex geometries and delicate materials
- **Minimum production changeover times** enable flexible, future-proof production systems
- **Extremely gentle part handling due to 3-axis vibration technology:** parts can be moved in all directions, including the optimal choice of flipping amplitude for each part. Minimal abrasion as parts do not need to be recirculated. Platform purge possible
- **Advanced reliability and durability** due to State-of-the-Art Voice Coil technology; no compressed air needed
- **Avoid back-feeding of vibration into surrounding machines** thanks to isolation of vibratory platform and feeder base
- **Systematic part orientation** can be achieved with intelligently structured platforms (grooves, holes, nests)
- **Easy configuration** with Feeder Control Center Software

Options:

- **EYE+ Smart Control:** artificial intelligence-based image processing system
- **Structured vibration platforms** (holes, grooves, various materials)
- **Integrated LED backlight** (red/ green/ blue/ white/ infrared)
- Expandable with RNA vibration hopper type BVL
- Expandable with other RNA components to a complete feeding system solution
- Connection cables

3-Axis Vibration Technology:

Parts can be moved in all directions thanks to patented 3-axis vibration technology:

- Select the optimal choice of flipping amplitude for each part.
- Combine advanced movements with structured platforms to orient and separate parts.
- Distribute your parts on the surface faster, more gentle and more efficiently than ever.

General Features:

- Communication: Ethernet (TCP/IP), Modbus TCP, Optional via Gateway: EtherNet/IP, EtherCAT, PROFINET, CC-Link
- Power supply: 24V, 4A
- Backlight synchronization input
- I/O for synchronization with up to two hoppers
- Easy mechanical fixation with four M5 screws

Dimensions:

• Vibration platform	A:	371 mm	14.6 in
	B:	427 mm	16.8 in
• Footprint	C:	372 mm	14.7 in
	D:	600 mm	23.7 in
• Maximum height	E:	320 mm	12.6 in
• Pick height	F:	255 mm	10.0 in
• Typical part size		30-150 mm	1.6-6 in
